DETAILED ACTION

Response to Arguments

1. Applicant's arguments see pages 2-18 filed 1/26/04, with respect to claims 1-5, and 7-25 have been fully considered and are persuasive. The final rejection of 6/13/03 has been withdrawn.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 1-5 and 7-25 is rejected under 35 U.S.C. 1 12, second paragraph, as being Indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The phrase 'first material" and the phrase 11 more conductive" is vague and indefinite; Because the conductive material is not specified and the term more conductive is a relative term. How is the fist material more conductive than the second material? Is the material electrically conductive, magnetically conductive, and thermally conductive?

Referring to claims 2 and 8

The phrase 'conductive material form of plastic' is vague and indefinite; because plastic is well know material for insulating not conductive.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Johnston (6232681).

As best understood, Johnston shows a motor in fig.1-5 comprising: a stator body having a solid core (22) formed of a first material made of powder metal / Thermoplastic with a plurality of circumferentially spaced portions (25) having a second material consisting of plastic at an outer peripheral surfaces, and a conductive material (21) is deposited between the teeth (23) over the insulating layer that's more conductive than the first material. Wherein, the insulating material (thermo-plastic) is place around the circumferentially spaced teeth, and a conductive material (copper winding) deposited between the teeth.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 09/833,165

purpose driving an electromotive window.

Art Unit: 2834

5. Claims 7-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Johnston (6232681) in view of Schmidt (5517070)

Johnston substantially teach the claim invention: however does not show an vehicle component movable between a plurality of operational position relative to a fixed component movable between a plurality of operational position relative to a fixed component between the operation position between the stator and rotor cooperating to drive the motor of the output shaft and a closer member fixed to a frame. Schmidt teaches vehicle component fig.1 comprising: an electric motor having a vehicle component (sunroof not shown) movable between a plurality of operational positions relative to a fixed component (2) driving by an AC motor wherein the output shaft (3) is coupled to the vehicle component between the operation position between the stator (13) and rotor (33) cooperating to drive the motor of the output shaft (14) with a gear assembly (32) coupled to the closer member (window see col.2 line 1-3) fixed to a frame for the purpose of driving the closes member. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the electric motor of Johnston with the teaching of Schmidt electric motor for the

Referring to claims 3,9, and 20, little patentable weight has been given to the method of manufacturing limitations (i. e. co-extrusion and) since "even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the

Application/Control Number: 09/833,165

Art Unit: 2834

same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." *In re Thorpe,* 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985)

Referring to claims 16 and 19 the selection of a known material based upon its suitability (i.e. Ferro- plastic, nylon filled plastic) for the intended use is a design consideration within the ordinary skill in the art. In re leshin,227 f.2d 197,125,USPQ416(ccp1960).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karen B Addison whose telephone number is 571-272-2017. The examiner can normally be reached on 8:00 to 4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Darren Schuberg can be reached on 571-272-2204 The fax phone number for the organization where this application or proceeding is assigned is 571-272-2204.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
